

"Enantioselective Molecular Recognition between β -Sheets" Chung, D. M.; Nowick, J. S.
Presented at the 227th National Meeting of the American Chemical Society, Anaheim, CA,
March 2004; paper ORG 359.

Abstract: This paper demonstrates that molecular recognition between β -sheets is highly enantioselective. ^1H HNMR studies of pairings of peptide model systems in CDCl_3 solution establish that homochiral pairing among antiparallel β -sheets occurs with >96:4 selectivity over heterochiral pairing.
